339-234-8675

PROFESSIONAL SUMMARY

Senior Software Engineer, AI specialist, team lead, technical evangelist, mentor, with over 25 years experience delivering programs on time and on budget, and with deep ties to the developer community. Author of two dozen programming books and 25 Pluralsight courses (including books on C#, APIs and Git). Thirteen years Microsoft MVP.

PROFESSIONAL EXPERIENCE

AI Solution Architect <i>The Training Boss</i>	2026
Training in AI with a focus on Microsoft Agent Framework	
Senior Software Engineer <i>CNH</i>	2021 – 2026
Created APIs using C# and Azure, smoothing interactions between front end and databases, integrating business logic. Creation of Azure Functions and REST APIs. AI integration and use of AI in programming (CoPilot/Claude). Completing 16 week course in agentics from Johns Hopkins University. Comfortable with Microsoft Agent Framework.	
Principal Developer <i>Cognizant</i>	2019 – 2021
- Collaborated with Schneider Electric to develop a cross-platform application for real-time interaction with sensors and hardware in smart buildings, enhancing operational efficiency. REST APIs - Hands-on programming, architecture, and mentorship in Object-Oriented programming with C#	
CTO <i>Liberty Associates, Inc.</i>	2012 – 2019
Delivered .NET consulting services, enhancing application performance and team productivity through tailored solutions.	
MVP <i>Microsoft</i>	2013 – Present
International speaker. Author. Podcaster. Videocaster. Blogger	
Senior Evangelist <i>Microsoft</i>	2005 – 2012
- International speaker, community liaison, and best practices development. - Worked with engineering team, MVPs, and community	
Distinguished Software Engineer – AT&T Vice President Information Technology - Citi	

EDUCATION & CERTIFICATIONS

Bachelor of Arts – *Excelsior University*. Agentics from *Johns Hopkins University*

Mads Torgersen – Lead Designer/Architect C# - Microsoft

I've known Jesse for nearly two decades as a colleague, as a Microsoft MVP and as a pillar of the C# community. I've had so many interactions with Jesse over the years that demonstrate his knack for getting to the heart of complex technical issues, his generosity with insights and feedback, and his always pleasant, helpful demeanor.

As the lead designer of the C# language, I've witnessed the technical depth of his highly regarded books, as well as his gift for communicating difficult ideas in multiple different types of media. I'm lucky to be a frequent guest on his popular podcast, and a big fan of his humble, approachable style of communication. It seems that Jesse is always learning, relentlessly approaching new domains and topics with curiosity, thoughtfulness, intelligence and dedication.

I recommend Jesse wholeheartedly - any technical team would be lucky to have him!

Chris Crous – Team Lead/ Manager CNH

It is with great pleasure and confidence that I recommend Jesse Liberty for a software engineering position within your organization. Jesse was a dedicated member of my team at CNH Industrial during which time he consistently demonstrated exceptional technical proficiency and a tireless work ethic.

Throughout his tenure, Jesse became an expert in:

- RESTful API Development: Building and maintaining high-performance, secure APIs.
- Cloud Computing: Utilizing Azure Functions to create scalable, serverless solutions.
- Full-Stack Integration: Effectively bridging the gap between mobile user experiences and complex backend systems.

What truly sets Jesse apart is his character. He is an incredibly hard-working and dedicated professional. Regardless of the complexity of the task, Jesse approaches every challenge with a knowledgeable and analytical mindset. He was a reliable teammate who could always be counted on to deliver high-quality code under tight deadlines.

I recommend Jesse Liberty without reservation. He has the technical depth to solve complex problems and the professional maturity to thrive in any collaborative environment. He would be an asset to any engineering team.

Daniel Brevitt – Team Lead CNH

I had the pleasure of working with Jesse for around 18 months with a focus on cross-platform development. From the start, Jesse's deep technical knowledge and genuine passion for innovation stood out. Jesse consistently delivered high-quality solutions. He played a key role in designing and developing impactful features that significantly improved the product's functionality and user experience and he was a direct contributor to our project's success.

Beyond his technical skills, Jesse is an outstanding mentor and communicator. He regularly guided the team through code reviews, architectural discussions and knowledge sharing and he fostered a collaborative, growth-oriented environment. His clear communication - both technical and with stakeholders - ensured alignment and

understanding across the team. His professionalism, expertise and support for the team were integral to our success and I'd happily work with him again in the future.

Teja Reddy - Senior Developer CNH

Recognition: I'd like to recognize Jesse for consistently setting an inspiring example of curiosity, adaptability and a growth mindset. Your eagerness to explore new technologies like .NET Aspire and tools like GitHub CoPilot and more importantly, to share your learnings with the team truly reflects a passion for Tech. Your proactive knowledge sharing and encouragement constantly motivate teammates like me to elevate our own standards and keep learning. Thank you for being a steady source of inspiration.

Adam Summers - Technical Manager Schneider Electric

I have worked with Jesse for several years in an extremely high pace and ever-changing environment, where he has been able to adapt and learn specific domain concepts to support feature development. Jesse has also been pivotal in supporting our team in establishing better practices for working with legacy code and implementing a unit testing pattern which has been taken up by the rest of the team.

From the outset Jesse was confident in providing valuable insights on C# .NET Architecture and design principles. Jesse has always provided knowledge on the latest framework and language updates and keeps himself abreast of the upcoming changes through his continued involvement as an MVP with the Microsoft Community. This accompanied with his professionalism and thirst for learning and disseminating knowledge has also been a great support to the wider team. Jesse takes time to apply new learning in examples and proof of concepts to support his theories when contributing to new feature development.

He has been an incredibly well thought of and respected member of the team. Jesse is approachable, humorous at the right times and always a great support to his peers. He has been an absolute asset to have for the mobile development team and is someone I will continue to follow for future updates and insights in the tech space.

John Galloway – Senior Project Manager, Microsoft

I've worked with Jesse as a teammate at Microsoft and we've kept in touch since then. Jesse has two really great skills: he's adept at picking up new skills, and is really good at explaining them to others. He's also great to work with.

Rey Bango – Principal Program Manager Lead, Microsoft

Jesse is an incredible technologist but he is equally passionate about software development, always striving to be a top mind in his field and ensuring that the community has a person they can depend on for the best information. I was fortunate to have worked with Jesse and see this talented professional in action and wouldn't hesitate to recommend him
